Phase I: warmup
Shared global model
Collect and aggregate updates
Phase II: paired coverage
Independent traps A and B
Each client receives both
Summarize responses
Norm and layer profile
Exact current/previous replay
Compare and certify
Compare same-trap peers
Verify both trap responses
Repeat paired coverage during review or probation
Clear
Clear result in this cycle
Ordinary participation
Unresolved
Ambiguous or incomplete
Needs further checks
Strong
Strong paired evidence
Temporary quarantine
Phase IV: sparse audits
Eligible updates aggregate
Audit findings open review
Rehabilitation or bounded release
Audit finding
Bounded follow-up
Paired checks when enrolled
Unconfirmed review expires
No renewal from weak flags
Unconfirmed: bounded review
Strong paired evidence
Phase III: confirmation
Separate norm/profile counts
Ambiguity retains evidence
Clear cycles reset evidence
Repeated fresh confirmation
Aggregation continues alongside auditing
Update the global model using eligible ordinary responses.
Exclude trap responses, quarantined clients and removed clients.
An unresolved client may contribute when not quarantined.
Permanent removal
Fresh repeated evidence
from the same component,
or confirmed exact replay
